Procedure

Combine Versene & water of phase C with propellor. Slowly add Lathanol to phase C with prop, scraping sides occasionally, then heat to 75C with prop. Mix with prop as slowly as possible to minimize foam. Add Aqua Sol to C with prop maintaining 70-75C. Combine phase B, heat & mix occasionally until clear. Combine water & Versene of phase A with prop. Sprinkle in Cellosize with prop, and heat to 75C. Combine phase E & heat to 80C in oil bath. Add premixed phase B to phase A with prop. @ 75C. Add phase C to phase AB @ 75C with prop. Add phase D to phase ABC @ 75C with prop. Add phase E @ 80C to phase ABCD @ 75C with prop slowly, allowing the additions to be taken in. Add phase F to phase ABCDE @ 50C with prop. & switch to sweep.
